

About Project:

I have implemented React as frontend and Nodejs/expressjs as backend for this project.
I have used google firebase as google Oauth authentication system and mongodb cloud for database.

Zapier's zap was Webhook which was triggered when download button gets clicked it automatically sends email to the customer regarding bill download.

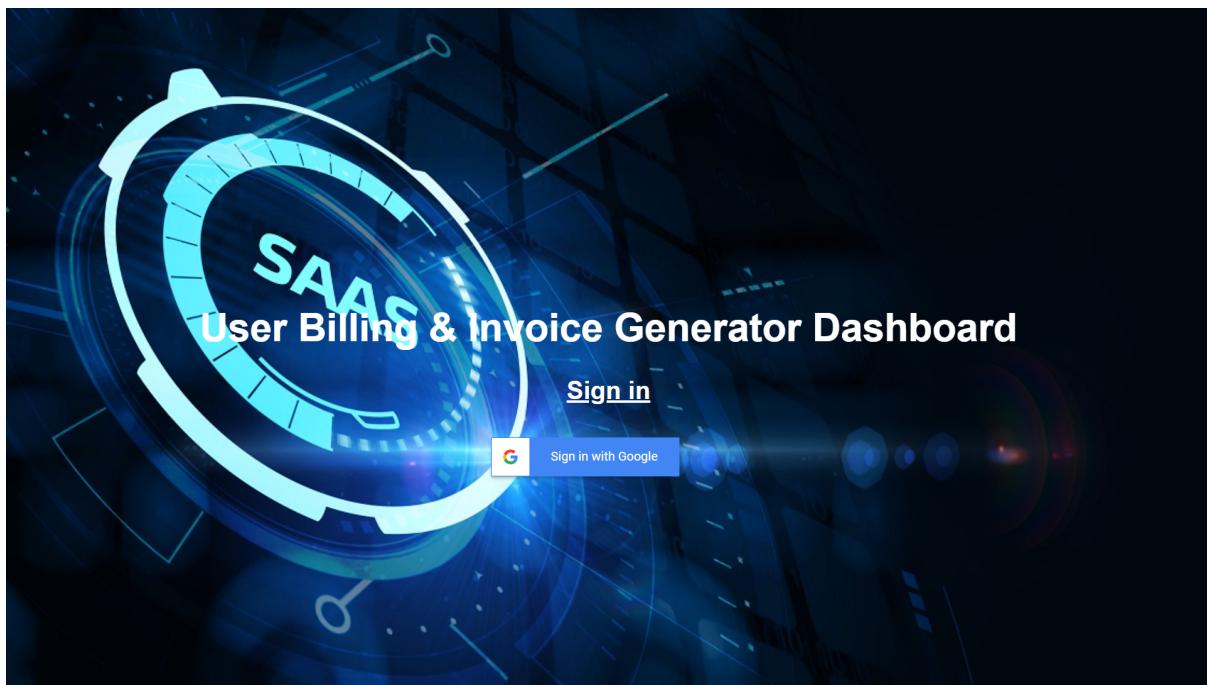

Along with that it also reminds daily for the bill Payment.

About Our SAAS Software

Data Tracking and Billing

Efficiently track user activities, including total duration, logins, and device information. Utilize powerful analytics to gain insights into user behavior and optimize your services.

Usage-Based Billing

Implement usage-based billing to ensure fair pricing for your users. Our system dynamically calculates costs based on actual usage, providing flexibility and transparency.

How We Calculate Your Orders

Each order includes features, duration used, price, discounted price, and total cost. The table above shows a detailed breakdown of your orders. To download the bill, click the "Download Bill" button. This will generate a PDF invoice containing a summary of your orders, including the total cost.

Email Notification

Additionally, a notification email will be sent to your registered email address once the download is complete.
